## **Requirement For Impalement Protection** **Plausible Deniability**

Temecula, CA. (June 2, 2022) – J- CAT Safety Products, a leading manufacturer of safety products for the construction industry, has released a special report for California Concrete Professionals entitled *The Impact of Plausible Deniability*. This report describes the financial consequences a company may experience if not compliant with OSHA, specifically Cal-OSHA regulations.

“As we spoke with members of the construction community, we found a lot of confusion surrounding the requirements for job site safety, specifically impalement protection,” said Kristin Messer, Chief Operations Officer for J-CAT Safety Products. “This special report should help to clear up any misconceptions regarding this important issue,” added Messer.

J-CAT has designed and manufactured an impalement protection device, certified by Cal-OSHA (C-1741-AG), to possibly mitigate any potential financial ramifications imposed by Cal-OSHA should a job site be found to have exposed steel.

J-CAT Safety Products is the first and only company to produce and receive a certification by Cal-OSHA for this specific regulation. “I am proud of the J-CAP™ Safety Cover. We have
